ESMO-MAGNITUDE OF CLINICAL BENEFIT SCALE

**ESMO-MCBS
factsheet**

PROMOTING CLEAR AND EVIDENCE-BASED COMMUNICATION ABOUT THE BENEFIT OF CANCER TREATMENTS

In 2015 the European Society for Medical Oncology (ESMO) launched the **ESMO-Magnitude of Clinical Benefit Scale (ESMO-MCBS)**^{1,2} to facilitate improved decision-making regarding the value of anti-cancer therapies, promote the accessibility and reduce inequity of access to high value cancer treatments. Since value is based on considerations of the magnitude of clinical benefit as well as cost, and given the challenges to understanding the actual magnitude of the clinical benefit, the ESMO-MCBS was developed as a validated and reproducible scale that is applicable across the full range of solid tumours in oncology.

It incorporates a structured, rational and valid approach to data interpretation and analysis that reduces the tendency to have judgements affected by bias or uninformed and/or idiosyncratic data interpretation that has been developed in accordance with the public policy standard of “accountability for reasonableness”.

It is a dynamic tool and its criteria are revised on a regular basis. The ESMO-MCBS is an important first step to the critical public policy issue of value in cancer care, helping to frame the appropriate use of limited public and personal resources in the delivery of cancer care.

¹ Cherny NI, Sullivan R, Dafni U, et al. A standardised, generic, validated approach to stratify the magnitude of clinical benefit that can be anticipated from anti-cancer therapies: the European Society for medical oncology magnitude of clinical benefit scale (ESMO-MCBS). *Ann Oncol*2015;26:1547–73.

² Cherny NI, Dafni U, Bogaerts J, et al. ESMO-Magnitude of Clinical Benefit Scale version 1.1. *Ann Oncol*2017;28:2340–66.

ESMO-MCBS: SCORING CRITERIA ACCORDING TO CLINICAL SETTINGS

The scale considers overall survival, progression-free survival, disease free survival, hazard ratio, response rate, quality of life, prognosis of the condition and toxicity. There are 5 evaluation forms.

01. Evaluation form 1: for new approaches to adjuvant therapy or new potentially curative therapies

02. Evaluation form 2a: for therapies that are not likely to be curative with primary endpoint of overall survival (OS) with separate sheets for:

- IF median OS with the standard treatment is ≤ 12 months
- IF median OS with the standard treatment is >12 months, ≤ 24 months
- IF median OS with the standard treatment is >24 months

03. Evaluation form 2b: for therapies that are not likely to be curative with primary endpoint progression-free survival (PFS) with separate sheets for:

- IF median PFS with standard treatment is ≤ 6 months
- IF median PFS with standard treatment is >6 months

04. Evaluation form 2c: for therapies that are not likely to be curative with primary endpoint other than OS or PFS or equivalent (non-inferiority) studies.

05. Evaluation form 3: for single-arm studies in “orphan diseases” and for diseases with “high unmet need” when primary outcome is PFS or overall response rate (ORR).

The highest grades of the ESMO-MCBS in the curative setting are A and B and in the non-curative setting 5 and 4, which indicate a substantial magnitude of clinical benefit.

WHAT IS THE POTENTIAL USE AND ACCESSIBILITY OF THE ESMO-MCBS?

This structured and disciplined approach to deriving estimates of clinically meaningful benefit from published data can be used in a range of settings, including:

- 1. Public policy applications** – Grading derived from the ESMO-MCBS provides a backbone for value evaluations of cancer medicines and can help public policy-makers in the advancement of ‘accountability for reasonableness’ in resource allocation deliberations.
- 2. Formulation of clinical guidelines** – For cancer therapies, the ESMO-MCBS scale provides a clear, well-structured and validated mechanism to indicate the magnitude of clinical benefit, in addition to the level of evidence, that can inform both national and international guidelines.
- 3. Clinical decision making** – The data enclosed in ESMO-MCBS scoring can help clinicians weigh the relative merits of competing relevant therapeutic options and may also be of benefit in explaining the relative merit of therapeutic options to patients and their families. This information may be especially helpful when treatments incorporate substantial out-of-pocket costs.
- 4. Editorial decisions and commentaries** – The ESMO-MCBS may be of use to editors, peer reviewers and commentators in considering the clinical significance of research findings from randomised clinical studies, cohort studies and meta-analyses with statistically significant positive findings.
- 5. Education** – The ESMO-MCBS is a powerful tool to teach a disciplined and validated approach to data interpretation. It is especially valuable for oncologists in training and for application in journal club discussion.

HOW IS THE ESMO-MCBS BEING USED?

It is incorporated in the ESMO Clinical Practice Guidelines and the Pan-Asian Adapted Guidelines, helping to provide patients with the best care options and setting the highest standards for cancer care.

- It has been acknowledged by the World Health Organisation as ‘a screening tool to identify cancer treatments that have potential therapeutic value that warrants full evaluation for the Essential Medicines List listing’³.
- It is being used as part of Health Technology Assessment (HTA) processes in a growing number of countries.
- It has been presented inside and outside Europe and in educational workshops for stakeholders, patient (advocates), pharma representatives and HTA bodies to increase knowledge sharing of the tool.
- It being used in oncology training programmes and journal club presentations, modelling a structured approach to data interpretation in the evaluation of clinical benefit.
- ESMO offers support to third parties wanting to use the scale.
- ESMO has developed a searchable portal and online tools to facilitate the use of the ESMO-MCBS.

The screenshot shows a web interface for the ESMO-MCBS. At the top, there are filter buttons for 'Agent', 'Tumour', and 'Score' (which is checked). Below this, there are dropdown menus for 'A (1)', 'Trastuzumab (1)', 'Tumour type', 'Tumour sub-type', and 'Tumour sub-group'. A 'reset selection' link is also present. The main part of the interface is a table with the following data:

Tested Agent	Combined Agent(s)	Control Arm	Treatment Setting	Tumour Type	Tumour Sub-type	Tumour Sub-group	Tumour Stage	Score	Ref.	Score card
Trastuzumab		Chemotherapy	Adjuvant or neo-adjuvant HER2 positive tumours	Breast Cancer	Breast Cancer	HER2+	Early	A	↗	→

**ESMO-MCBS
instructions
and forms**

INSTRUCTIONS

01. There are 5 forms

Evaluation form 1: for new approaches to adjuvant therapy or new potentially curative therapies.

Evaluation form 2a: for therapies that are not likely to be curative with primary endpoint of overall survival (OS) with separate sheets for:

- IF median OS with the standard treatment is ≤ 12 months
- IF median OS with the standard treatment is >12 months, ≤ 24 months
- IF median OS with the standard treatment is >24 months

Evaluation form 2b: for therapies that are not likely to be curative with primary endpoint progression-free survival (PFS) with separate sheets for:

- IF median PFS with standard treatment is ≤ 6 months
- IF median PFS with standard treatment is >6 months

Evaluation form 2c: for therapies that are not likely to be curative with primary endpoint other than OS or PFS or equivalent (non-inferiority) studies.

Evaluation form 3: for single-arm studies in “orphan diseases” and for diseases with “high unmet need” when primary outcome is PFS or overall response rate (ORR).

02. ESMO-MCBS scores

The highest grades of the ESMO-MCBS in the curative setting are A and B and in the non-curative setting 5 and 4, which indicate a substantial magnitude of benefit.

03. Analysis of phase III trials

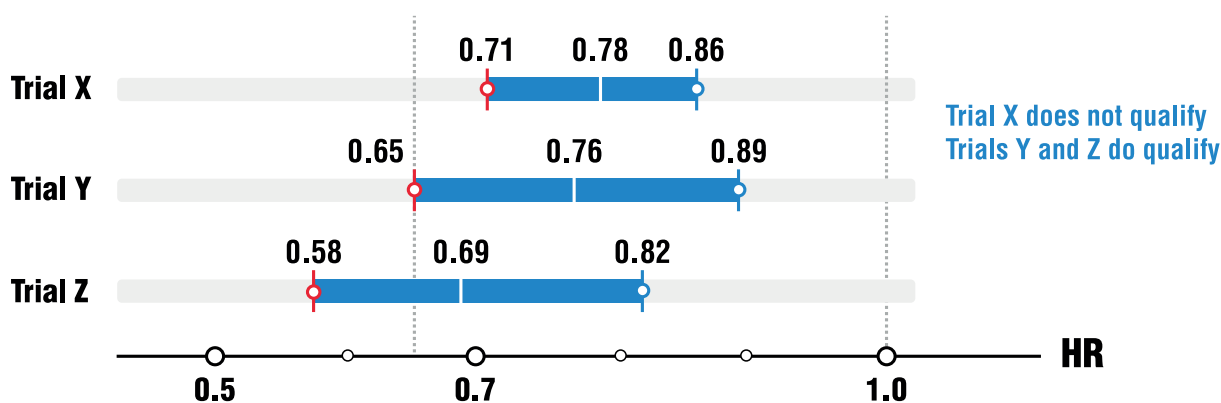

- Adequately powered studies showing statistically significant improvement in the primary outcome (defined by $P < 0.050$).
- Careful analyses “control arm” and identification of endpoints.

- **Check subgroup analysis**
 - a. Studies with pre-planned subgroup analyses with a maximum of 3 subgroups can be graded (provided there is adjustment for multiple comparisons).
 - b. When statistically significant results are reported for any subgroup, then each of these should be graded separately.
 - c. Subgroups not showing statistically significant results are not graded.
 - d. Except for studies that incorporate collection of tissue samples to enable re-stratification based on new genetic or other biomarkers, findings from un-planned (post-hoc) subgroup analysis cannot be graded and they can only be used as foundation for hypothesis generation.

04. More than one outcome may be applicable

The statistical significance of secondary outcomes are determined by the same criteria as for primary outcomes i.e. defined by $P < 0.050$.

05. For a required hazard ratio (HR), not the point estimate but the lower limit of 95% confidence interval (CI) estimated based on the observed HR in the trial should encompass the required HR.

06. In the case of OS in the non-curative setting check for:

- Reduced toxicity
- Improvement in quality of life (QoL)
- Report final adjusted grade taking into account toxicity, and QoL when relevant.

07. In the case of PFS in the non-curative setting check for:

- Indicators of toxicity
- Survival data also available
- Early termination with crossover based on planned interim survival analysis
- Global QoL advantage using validated scale if applicable
- Report final adjusted grade taking into account toxicity, survival advantage and QoL when applicable.

Curative Setting Form

EVALUATION FORM 1

For new approaches to adjuvat therapy or new potentially curative therapies

Name of study:			
Study medicine:		Indication:	
First author:		Year:	Journal:
Name of evaluator:			

GRADE A	>5% improvement of survival at ≥ 3 years follow-up	<input type="radio"/>
	Improvements in DFS alone (primary endpoint) (HR <0.65) in studies without mature survival data	<input type="radio"/>
GRADE B	$\geq 3\%$ <u>BUT</u> $\leq 5\%$ improvement at ≥ 3 years follow-up	<input type="radio"/>
	Improvement in DFS alone (primary endpoint) (HR 0.65 - 0.8) without mature survival data	<input type="radio"/>
	Non inferior OS or DFS with reduced treatment toxicity or improved QoL (with validated scales)	<input type="radio"/>
	Non inferior OS or DFS with reduced treatment cost as reported study outcome (with equivalent outcomes and risks)	<input type="radio"/>
GRADE C	<3% improvement of survival at ≥ 3 years follow-up	<input type="radio"/>
	Improvement in DFS alone (primary endpoint) (HR >0.8) in studies without mature survival data	<input type="radio"/>
	Improvements in pCR alone (primary endpoint) by $\geq 30\%$ relative <u>AND</u> $\geq 15\%$ absolute gain in studies without mature survival data	<input type="radio"/>

Mark with \checkmark if relevant

Magnitude of clinical benefit grade (highest grade scored)	A	B	C
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Curative setting grading - A and B indicates a substantial magnitude of clinical benefit.

DFS, disease-free survival; HR, hazard ratio; OS, overall survival; pCR, pathologic complete response/remission; QoL, quality of life.

Non-Curative Setting Forms

EVALUATION FORM 2A

For therapies that are not likely to be curative with primary endpoint of OS

Name of study:	<input type="text"/>		
Study medicine:	<input type="text"/>	Indication:	<input type="text"/>
First author:	<input type="text"/>	Year:	<input type="text"/>
		Journal:	<input type="text"/>
Name of evaluator:	<input type="text"/>		

If median OS with the standard treatment is ≤ 12 months

GRADE 4	HR ≤ 0.65 <u>AND</u> gain ≥ 3 months	<input type="radio"/>
	Increase in 2 year survival $\geq 10\%$	<input type="radio"/>
GRADE 3	HR ≤ 0.65 <u>AND</u> gain ≥ 2.0 - <3 months	<input type="radio"/>
GRADE 2	HR ≤ 0.65 <u>AND</u> gain ≥ 1.5 - <2.0	<input type="radio"/>
	HR >0.65 - 0.70 <u>AND</u> gain ≥ 1.5 months	<input type="radio"/>
GRADE 1	HR >0.70 <u>OR</u> gain <1.5 months	<input type="radio"/>

Mark with \checkmark if relevant

Preliminary magnitude of clinical benefit grade (highest grade scored)	4	3	2	1
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

Quality of life/Grade 3-4 toxicities* assessment

Does secondary endpoint QoL show improvement?

Are there statistically significantly less grade 3-4 toxicities impacting on daily well-being?*

*This does not include alopecia, myelosuppression, but rather chronic nausea, diarrhoea, fatigue, etc.

Mark with ✓ if relevant

Adjustments

01. Upgrade 1 level if improved QoL and/or less grade 3-4 toxicities impacting daily well-being are shown
02. If there is a long term plateau in the survival curve, and OS advantage continues to be observed at 5 years, also score according to form 1 (treatments with curative potential) and present both scores i.e. A/4.

	5	4	3	2	1
Final adjusted magnitude of clinical benefit grade	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

EVALUATION FORM 2A

For therapies that are not likely to be curative with primary endpoint of OS

Name of study:			
Study medicine:		Indication:	
First author:		Year:	Journal:
Name of evaluator:			

If median OS with the standard treatment >12 months ≤24 months

GRADE 4	HR ≤0.70 <u>AND</u> gain ≥5 months	<input type="radio"/>
	Increase in 3 year survival alone ≥10%	<input type="radio"/>
GRADE 3	HR ≤0.70 <u>AND</u> gain ≥3-<5 months	<input type="radio"/>
GRADE 2	HR ≤0.70 <u>AND</u> gain ≥1.5-<3 months	<input type="radio"/>
	HR >0.70-0.75 <u>AND</u> gain ≥1.5 months	<input type="radio"/>
GRADE 1	HR > 0.75 <u>OR</u> gain <1.5 months	<input type="radio"/>

Mark with ✓ if relevant

Preliminary magnitude of clinical benefit grade (highest grade scored)	4	3	2	1
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 (substantial benefit), 3 (moderate benefit), 2 and 1 (negligible benefit)

Quality of life/Grade 3-4 toxicities* assessment

Does secondary endpoint QoL show improvement?

Are there statistically significantly less grade 3-4 toxicities impacting on daily well-being?*

*This does not include alopecia, myelosuppression, but rather chronic nausea, diarrhoea, fatigue, etc.

Mark with ✓ if relevant

Adjustments

01. Upgrade 1 level if improved QoL and/or less grade 3-4 toxicities impacting daily well-being are shown
02. If there is a long term plateau in the survival curve, and OS advantage continues to be observed at 5 years, also score according to form 1 (treatments with curative potential) and present both scores i.e. A/4.

	5	4	3	2	1
Final adjusted magnitude of clinical benefit grade	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

EVALUATION FORM 2A

For therapies that are not likely to be curative with primary endpoint of OS

Name of study:	<input type="text"/>		
Study medicine:	<input type="text"/>	Indication:	<input type="text"/>
First author:	<input type="text"/>	Year:	<input type="text"/>
		Journal:	<input type="text"/>
Name of evaluator:	<input type="text"/>		

If median OS with the standard treatment >24 months

GRADE 4	HR ≤ 0.70 <u>AND</u> gain ≥ 9 months	<input type="radio"/>
	Increase in 5 year survival alone $\geq 10\%$	<input type="radio"/>
GRADE 3	HR ≤ 0.70 <u>AND</u> gain ≥ 6 -<9 months	<input type="radio"/>
GRADE 2	HR ≤ 0.70 <u>AND</u> gain ≥ 4 -<6 months	<input type="radio"/>
	HR > 0.70 - 0.75 <u>AND</u> gain ≥ 4 months	<input type="radio"/>
GRADE 1	HR > 0.75 <u>OR</u> gain <4 months	<input type="radio"/>

Mark with \checkmark if relevant

Preliminary magnitude of clinical benefit grade (highest grade scored)	4	3	2	1
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

Quality of life/Grade 3-4 toxicities* assessment

Does secondary endpoint QoL show improvement?

Are there statistically significantly less grade 3-4 toxicities impacting on daily well-being?*

*This does not include alopecia, myelosuppression, but rather chronic nausea, diarrhoea, fatigue, etc.

Mark with √ if relevant

Adjustments

01. Upgrade 1 level if improved QoL and/or less grade 3-4 toxicities impacting daily well-being are shown
02. If there is a long term plateau in the survival curve, and OS advantage continues to be observed at 7 years, also score according to form 1 (treatments with curative potential) and present both scores i.e. A/4.

	5	4	3	2	1
Final adjusted magnitude of clinical benefit grade	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

EVALUATION FORM 2B

For therapies that are not likely to be curative with primary endpoint of PFS

Name of study:			
Study medicine:		Indication:	
First author:		Year:	
		Journal:	
Name of evaluator:			

If median PFS with standard treatment ≤ 6 months

- GRADE 3** HR ≤ 0.65 AND gain ≥ 1.5 months
- GRADE 2** HR ≤ 0.65 BUT gain < 1.5 months
- GRADE 1** HR > 0.65

Mark with \checkmark if relevant

Preliminary magnitude of clinical benefit grade (highest grade scored)	3	2	1
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

Early stopping or crossover

Did the study have an early stopping rule based on interim analysis of survival?

Was the randomization terminated early based on the detection of overall survival advantage at interim analysis?

If the answer to both is “yes”, then see letter “E” in the adjustment section below

Mark with ✓ if relevant

Toxicity assessment

Is the new treatment associated with a statistically significant incremental rate of:

«Toxic» death >2%

Cardiovascular ischemia >2%

Hospitalisation for «toxicity» >10%

Excess rate of severe CHF >4%

Grade 3 neurotoxicity >10%

Severe other irreversible or long lasting toxicity >2% please specify:

(Incremental rate refers to the comparison versus standard therapy in the control arm)

Mark with ✓ if relevant

Quality of life/Grade 3-4 toxicities* assessment

Was QoL evaluated as secondary outcome?

Does secondary endpoint QoL show improvement?

Are there statistically significantly less grade 3-4 toxicities impacting on daily well-being?*

*This does not include alopecia, myelosuppression, but rather chronic nausea, diarrhoea, fatigue, etc.

Mark with ✓ if relevant

EVALUATION FORM 2B

For therapies that are not likely to be curative with primary endpoint of PFS

Adjustments

- A** When OS as secondary endpoint shows improvement, it will prevail and the new scoring will be done according to form 2a.
- B** Downgrade 1 level if there is one or more of the above incremental toxicities associated with the new medicine.
- C** Downgrade 1 level if the medicine ONLY leads to improved PFS (mature data shows no OS advantage) and QoL assessment does not demonstrate improved QoL.
- D** Upgrade 1 level if improved QoL or if less grade 3-4 toxicities that bother patients are demonstrated.
- E** Upgrade 1 level if study had early crossover because of early stopping or crossover based on detection of survival advantage at interim analysis.
- F** Upgrade 1 level if there is a long-term plateau in the PFS curve, and there is >10% improvement in PFS at 1 year.

Final, toxicity and QoL adjusted, magnitude of clinical benefit grade	4 <input type="checkbox"/>	3 <input type="checkbox"/>	2 <input type="checkbox"/>	1 <input type="checkbox"/>
--	--------------------------------------	--------------------------------------	--------------------------------------	--------------------------------------

Highest magnitude clinic benefit grade that can be achieved grade 4.

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

EVALUATION FORM 2B

For therapies that are not likely to be curative with primary endpoint PFS

Name of study:			
Study medicine:		Indication:	
First author:		Year:	
		Journal:	
Name of evaluator:			

If median PFS with standard treatment >6 months

GRADE 3	HR ≤ 0.65 <u>AND</u> gain ≥ 3 months	<input type="radio"/>
GRADE 2	HR ≤ 0.65 <u>BUT</u> gain < 3 months	<input type="radio"/>
GRADE 1	HR > 0.65	<input type="radio"/>

Mark with \checkmark if relevant

Preliminary magnitude of clinical benefit grade (highest grade scored)	3	2	1
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

--	--------------------------------------	--------------------------------------	--------------------------------------	--------------------------------------

Highest magnitude clinic benefit grade that can be achieved grade 4.

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

EVALUATION FORM 2C

For therapies that are not likely to be curative with primary endpoint than OS or PFS or equivalence studies

Name of study:			
Study medicine:		Indication:	
First author:		Year:	Journal:
Name of evaluator:			

Primary outcome is Toxicity or Quality of Life AND Non-inferiority Studies

- GRADE 4** Reduced toxicity or improved QoL (using a validated scale) with evidence for statistical non-inferiority or superiority in PFS/OS
- GRADE 3** Improvement in some symptoms (using a validated scale) BUT without evidence of improved overall QoL

Primary outcome is Response Rate

- GRADE 2** RR is increased $\geq 20\%$ but no improvement in toxicity/QoL/PFS/OS
- GRADE 1** RR is increased $< 20\%$ but no improvement in toxicity/QoL/PFS/OS

Mark with \checkmark if relevant

Final magnitude of clinical benefit grade	4	3	2	1
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

EVALUATION FORM 3

For single-arm studies in "orphan diseases" and for diseases with "high unmet need" when primary outcome is PFS or ORR

Name of study:			
Study medicine:		Indication:	
First author:		Year:	Journal:
Name of evaluator:			

GRADE 3	PFS ≥ 6 months	<input type="radio"/>
	ORR (PR+CR) $\geq 60\%$	<input type="radio"/>
	ORR (PR+CR) ≥ 20 - $<60\%$ <u>AND</u> DoR ≥ 9 months	<input type="radio"/>
GRADE 2	PFS ≥ 3 - <6 months	<input type="radio"/>
	ORR (PR+CR) ≥ 40 - $<60\%$	<input type="radio"/>
	ORR (PR+CR) ≥ 20 - $<40\%$ <u>AND</u> DoR ≥ 6 - <9 months	<input type="radio"/>
GRADE 1	PFS 2- <3 months	<input type="radio"/>
	ORR(PR+CR) ≥ 20 - $<40\%$ <u>AND</u> DoR <6 months	<input type="radio"/>
	ORR (PR+CR) >10 - $<20\%$ <u>AND</u> DoR ≥ 6 months	<input type="radio"/>

Mark with \checkmark if relevant

Preliminary magnitude of clinical benefit grade (highest grade scored)	3	2	1
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Non-curative setting grading - 5 and 4 indicates a substantial magnitude of clinical benefit

Quality of life/Grade 3-4 toxicities* assessment

Was QoL evaluated as secondary outcome?

Does secondary endpoint QoL show improvement?

Are there $\geq 30\%$ grade 3-4 toxicities impacting on daily well-being?*

*This does not include alopecia, myelosuppression, but rather chronic nausea, diarrhoea, fatigue, etc.

Mark with \checkmark if relevant

Adjustments

A Downgrade 1 level if there are $\geq 30\%$ grade 3-4 toxicities impacting on daily well-being*

B Upgrade 1 level if improved QoL

C Upgrade 1 level for confirmatory, adequately sized, phase 4 experience

	4	3	2	1
