LEARNING OBJECTIVES

After attending this symposium, participants should be able to:

- Evaluate the latest data in bladder cancer from 2022
- Relate the new data to the current disease landscape and discuss how these will impact clinical decision-making
- Consider how practical approaches to biomarkers can be used to guide patient management
- Discuss the latest targeted, immune and antibody-drug conjugate therapies

This exciting session will be live in person and also live-streamed, so you will be able to submit your questions to the faculty during the symposium.
